

Driving + Protection + Etiquette.

The only driver
training that
blends all three.

We put decades of
experience into
this 3-day course.

Take it and become a
true Protection Driver.

This comprehensive 3-day course is the first to truly join together the disciplines of protection and security driving.

This revolutionary approach will give you a solid foundation of the hard and soft skills necessary for proficient protection driving.

Our Approach:

The Pilot

The focus is on developing the key skills essential for safe vehicle operation. There will be clear explanations of vehicle physics, driver capabilities and environmental challenges to better understand and manage behind the wheel emergencies.

The Professional Driver

This module contains a series of reality-based exercises proven to elevate driver confidence and enhance driving capabilities.

EP Behind the Wheel

Most evasive/defensive driving programs found in driving schools, security courses and law enforcement academies spend more than 98% of their training focused on preparing for events that may occur less than 2% of the time. Little or no attention is paid to the daily challenges encountered by driving professionals. By contrast, EPI puts a substantial focus on soft skills. EP Behind the Wheel is client-focused, addressing the reality of normal vehicle operation with a concierge-level of driving.
