

Skid Control Tactics

*High Tech Driving Techniques,
Skid Avoidance and
Practical Skid Management*

"The dynamics of the vehicle do not change... just the coefficient of grip"

Executive Protection Institute (EPI) presents this one-day course that includes the basics of skid avoidance and skid control techniques using the EASYDRIFT® Driver Training System (DTS) and hands on skid exercises. Students will utilize **DTS** through a series of controlled speed exercises and experience the important vehicle control principals that each exercise emphasizes.

Drive home with major key points for proper skid recovery work, and proper cornering techniques. Navigate turns more efficiently by learning skid control tactics, techniques and braking in a safe and controlled environment.

Additionally, we will review vehicle dynamics and driver assist equipment found on newer vehicles. So, if you are interested in Skid Recovery / Avoidance Training, or more advanced technical EVOC Training, EPI's Skid Control Tactics (**SCT**) experience will make the difference.

This training is applicable for Protection Drivers responsible for keeping their clients safe, all civilians including teenagers just learning to drive, and for all Law Enforcement Officers, military and First Responders.

Get the drift... this is the high tech SCT experience ONLY EPI can bring you.
